Slide 1 – Title

- EduGenie: Google Gemini Powered Learning Assistant
- AI-Powered Personalized Learning Assistant

- Presented by: Keerthana C
- Department: 2 year B.Sc CS (CYS)
- Clg Name: Arignar Anna College (Arts & Science), Krishnagiri

Slide 2 – Introduction

- EduGenie is an AI-based learning assistant.
- It uses Google Gemini to provide intelligent learning support.
- Helps students understand academic topics easily.
- Provides personalized explanations and study assistance.

Slide 3 – Problem Statement

- Students have different learning speeds and requirements.
- Finding simple explanations can be difficult.
- Students may have doubts outside classroom hours.
- Traditional learning methods provide limited personalization.
- EduGenie aims to provide 24/7 AI-based learning support.

Slide 4 – Objectives

- Provide instant answers to students' questions.
- Explain difficult concepts in simple language.
- Generate summaries and study materials.
- Support personalized learning.
- Improve student engagement and productivity.

Slide 5 – Proposed System

- EduGenie acts as an intelligent virtual tutor.
- Student → Question/Input → EduGenie → Google Gemini API → AI Processing → Personalized Response
- Natural-language interaction
- Context-aware responses
- Fast and interactive learning support

Slide 6 – Key Features

- AI Chat Assistant
- Topic Explanation
- Automatic Summarization
- Question & Answer Support
- Study Notes Generation
- Personalized Learning
- Multi-language Support

Slide 7 – Google Gemini Integration

• Google Gemini provides the AI intelligence behind EduGenie.

• User questions are sent to the Gemini API.

• Gemini processes the request and generates a response.

• EduGenie displays the response through its learning interface.

• Example: Student asks 'Explain photosynthesis simply' → EduGenie provides a student-friendly explanation with key points.

Slide 8 – System Architecture

- 1. User Interface
- 2. Application / Backend
- 3. Gemini API
- 4. Response Processing
- 5. Learning Content / Database
- Flow: User → UI → Backend → Gemini API → Response → User

Slide 9 – Technologies Used

- Frontend: HTML, CSS, JavaScript
- Backend: Python / Flask
- AI: Google Gemini API
- Database: MySQL / Firebase
- Development Tools: VS Code
- Platform: Web Application

Slide 10 – Advantages & Applications

• Advantages: Available anytime; Personalized explanations; Saves learning time; Easy to use; Supports self-learning.

• Applications: College education; School learning; Exam preparation; Programming assistance; Assignment support.

Slide 11 – Future Enhancements

- Voice-based learning assistant
- AI-generated quizzes
- Personalized study plans
- Progress tracking
- Image/document-based question answering
- Integration with educational platforms
- More advanced multilingual support

Slide 12 – Conclusion

• EduGenie combines AI and education to create an interactive learning experience.

• Google Gemini enables intelligent and natural conversations.

• The system can help students understand concepts, summarize information, and study more effectively.

• EduGenie demonstrates how generative AI can support personalized and accessible education.

• Thank You – Questions?
